Math 106: Review for Exam I

1. Find the following. [Substitution tip: usually let \( u \) = a function that’s “inside” another function, especially if \( du \) (possibly off by a multiplying constant) is also present in the integrand.]

   (a) \( \int_{1}^{4} \frac{e^{\sqrt{x}}}{\sqrt{x}} \, dx \)

   (b) \( \int_{\pi}^{2\pi} \cos^7(5x) \sin(5x) \, dx \)

   (c) \( \int \frac{7x^2}{1 + x^6} \, dx \)

   (d) \( \int_{6}^{10} x \sqrt{10 - x} \, dx \)
2. Suppose \( f(x) \) is decreasing and concave up.

(a) Put the following quantities in ascending order.

\[ L_{100}, R_{100}, T_{100}, M_{100}, \int_a^b f(x) \, dx \]

(b) What can you say with certainty about where \( S_{200} \) would fit into your list above?

3. Find the best possible left, right, midpoint, trapezoidal, and Simpson’s approximations to \( \int_4^{12} f(t) \, dt \) given the data in the table below.

<table>
<thead>
<tr>
<th>( t )</th>
<th>4</th>
<th>6</th>
<th>8</th>
<th>10</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>( f(t) )</td>
<td>15</td>
<td>11</td>
<td>8</td>
<td>4</td>
<td>3</td>
</tr>
</tbody>
</table>

4. Find bounds for each of the following errors if \( I = \int_2^7 \ln x \, dx \).

(a) \( |I - L_{100}| \)

(b) \( |I - T_{100}| \)

(c) \( |I - M_{100}| \)
5. If \( I = \int_{2}^{7} \ln x \, dx \), how many subdivisions are required to obtain a trapezoidal sum approximation with error of at most \( 1/1,000,000 \)?

6. Solve the differential equation \( \frac{dy}{dx} = 2xy + 6x \) if the solution passes through \((0, 5)\).

7. Write integrals equal to
   (a) the arc length of \( y = x^2 \) on the interval \([1, 5]\)
   (b) the area bounded by \( y = x^2 - 8x + 24 \) and \( y = 3x \)
8. Consider the region bounded by $y = \sqrt{x}$, $y = 0$, and $x = 9$. Write an integral equal to the volume generated if this region is revolved about

(a) the $x$-axis

(b) the line $x = -1$

9. A pyramid has a square base 30 feet to a side and a height of 10 feet. Write integrals equal to

(a) the volume of the pyramid

(b) the work done in pumping all the fluid to a point 5 feet above the pyramid if the pyramid is filled to a height of 8 feet with water (which weighs 62.4 pounds per cubic foot) [Students in the 8:00, 1:10, and 2:40 sections may omit this part.]
