YOUR GRADE IS BASED ON THE PROCESS AS WELL AS THE FINAL RESULT. SHOW ALL YOUR STEPS CLEARLY SO YOU WILL BE ELIGIBLE FOR THE MOST PARTIAL CREDIT. YOU MAY USE A CALCULATOR, BUT NO NOTES, BOOKS, OR OTHER STUDENTS. GOOD LUCK!

1.) (5 pts.) Using implicit differentiation, compute $\frac{dy}{dx}$ if $5x^2 - 6xy + 5y^2 = 16$.

$$10x - 6(y \cdot 1 + x \cdot \frac{dy}{dx}) + 10y \cdot \frac{dy}{dx} = 0$$

$$10x - 6y - 6x \frac{dy}{dx} + 10y \frac{dy}{dx} = 0$$

$$(10y - 6x) \frac{dy}{dx} = 6y - 10x$$

$$\frac{dy}{dx} = \frac{6y - 10x}{10y - 6x}$$

2.) (5 pts.) Use a reference triangle to rewrite $\tan(\arccos x)$ as an algebraic expression. That is, your new expression may include $x$, square roots, and/or fractions, but no trigonometric or inverse trigonometric functions.

\[ \arccos x = y \quad \cos y = x = \frac{\text{adj}}{\text{hyp}} = \frac{x}{1} \]

$$\tan(\arccos x) = \tan y = \frac{\text{opp}}{\text{adj}} = \frac{\sqrt{1-x^2}}{x}$$
